Drill Bits + Hole Saws + Blades + Core Drill Bits

About **COREPLUS**

As specialists in diamond cutting, CorePlus offers a comprehensive range of Blades, Dry Core Drill Bits, Tile Drill Bits and Hole Saws.

Our product ranges utilise the very latest design innovations and technological advancements in diamond cutting.

Uncomplicated naming and simplified packaging make it easy to match the correct blade for the material being cut. we believe we have introduced the easiest to understand range of diamond blades available.

When long blade life is the key selection criteria our Elite Endurance range provides the maximum number of cuts for your spend.

EN

13236

DOUBLE
LASER WELDED

+ Safety

Nothing is more important when working with diamond cutting equipment than safety. That's why we commit to certified quality management processes and testing of the highest competence. All our diamond cutting blades are manufactured to EN 13236 and our Elite Endurance range meets the additional certification standards required by oSa the German Organization for Safety of Abrasives.

+ Research & Innovation

Research and Innovation are at the heart of everything we do. Whilst quality and concentration of diamonds is an important factor in cut precision, the bond matrix that delivers the diamond is just as crucial. Our bond technology has been developed by the metallurgist professor at the University of Sheffield here in the UK and is specially formulated for different substrates. Our extensive expertise in brazing diamond is based in Newmarket, close to Cambridge University allowing us ease of access to additional world-class technical and development resources when required.

+ Manufacturing Technology

Impressive safety and quality standards can only be achieved through state-of-the-art production technology. We pride ourselves in the accuracy of our manufacturing, diamond-cutting products require very precise engineering, and this can only be achieved with modern systems and a highly trained team.

Why CorePlus Diamond Blades?

Safety & Quality

All blades are manufactured to EN 13236 and our Elite Endurance range meets the additional standards required by oSA the German Organisation for Safety of Abrasives.

Quality Diamond

Not all diamond is created equal. We use only the highest-grade diamond and select the correct grit size and wear rate for each type of material.

More Diamond

You will find a high concentration of diamond in every CorePlus blade of the right type that will fracture and create new sharp edges at the right time during the cut.

Specialist Bonding

The metal matrix bond is carefully controlled to expose the right amount of diamond at the right time to provide smooth fluid cutting.

Taller Segments

Segment height is not the only key feature, what is in the segment is most important, but our blades have taller segments for longer life.

Double Laser Welded

Elite Endurance blades are double welded by state-of-the-art laser technology reducing the risk of damaged segments achieving oSA level of tested safety.

Tensioned Core

The entire core is "tensioned" or tuned so that the stresses of centripetal force are minimised, permitting the blade to spin true on the spindle.

Easy Selection

You will find our easy to follow "Plus" star rating on the reverse of every blade pack. The blade's speed, longevity and cost are easily compared.

Diamond Blades

+ General Purpose

- Hybrid turbo technology (HTT), interspersed turbo segments for optimum balance of long life and fluid speed.
- High concentration of premium grade diamond per segment.
- Cutting edge bond metallurgy to prevent glazing.
- High-grade steel precision-engineered tensioned core for a blade that spins true.
- Manufactured to EN 13236 quality standards.

+ Diamond Core Drill Bits

Professional quality core construction and performance.

Premium grade diamond, 'V' groove segment design and an aerated core deliver a smooth drilling experience.

+ Diamond Core Accessories

Accessories to suit the diamond core drill bit range.

SDS and Hex core adaptors, extension bar, tapered masonry drill bit and extractor drift pin.

+ Diamond Core Sets

Diamond core drill bit sets contain the most popular sizes of diamond cores and accessories.

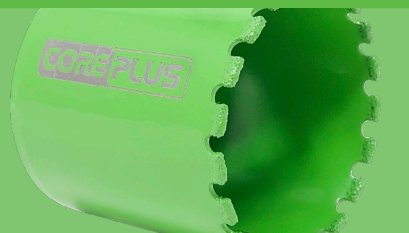

Supplied in a sturdy aluminium storage case.

Available in 7 or 11 piece.

+ Diamond Hole Saws

With leading edge vacuum brazing technology and premium grade braze-bonded diamonds, CorePlus diamond hole saws will cut the hardest of materials.

+ Diamond Tile Drill Bits

Professional, fast, clean cutting on porcelain and ceramic tiles.

+ Diamond Core Drill Bits

- Professional quality core construction plus performance features deliver a smooth drilling experience.
- 8mm diamond segments with a high concentration of premium grade diamond in the bond.
- Leading edge diamond/metal bonding metallurgy for long lasting core life.
- Latest 'V' groove segment design enables fast clearing of debris allowing a continuous fast cutting action.
- Ribbed core body further aids the clearing of waste debris.
- Aerated core design enhances cooling and extends core life.
- 1/2" BSP threaded compatible with standard core drilling machines and accessories.

+ Diamond Hole Saws

- Professional performance on a wide range of materials from hard Porcelain tile and stone to cement board and fibreglass.
- Premium grade braze-bonded diamonds will cut the hardest of materials.
- Leading edge vacuum brazing technology ensures diamonds stay bonded for extremely long life.
- Minimal water cooling required when cutting hard tile, stone and glass. Use fully dry on other materials.
- Ultra-thin kerf generates low amount of torque for faster cutting and extended battery life.
- Fluid, snag free cutting, no secondary finishing required.
- Use with an arbor on a cordless drill or with an adaptor nut on an angle grinder.

Code	Diameter	Length	Qty	List £	List €

- Adapts 32-114mm CorePlus diamond hole saws for use with angle grinders.
- Corrosion resistant hardened steel.

Code	Size	Qty	List £	List €
CORDMPNUT	32-114mm	1	£14.39	€16.69

+ Diamond Tile Drill Bits

- Professional, fast, clean cutting on porcelain and ceramic tiles.
- Premium grade braze-bonded diamonds will cut the hardest of materials.
- Leading edge vacuum brazing technology ensures diamonds stay bonded for extremely long life.
- Requires only minimal water cooling, not a continuous water feed.
- Easy start, no drill guide required.
- Core waste material auto-ejects allowing continuous hole cutting.
- Tri-Flat shank for excellent performance on cordless drills.

Code	Diameter	Segment Height	Qty	List £	List €
